Contents of Volume 59

Number 1, August 1977

Full Papers

H. Bustan and A. Herz. *In Vitro* Determination and Differentiation of Mouse Teratocarcinoma toward Myocardiogenesis 1

Constantin E. Sekeris and Klaus Scheller. Calliphorin, A Major Protein of the Blowfly: Correlation between the Amount of Protein, Its Biosynthesis, and the Titer of Translatable Calliphorin-mRNA during Development 12

Stephen A. Cohen and Gerald D. Fischbach. Clusters of Acetylcholine Receptors Located at Identified Nerve-Muscle Synapses *in Vitro* ... 24

A. I. Aronson and K. Chen. Rates of RNA Chain Growth in Developing Sea Urchin Embryos 39

Paola Pierandrei Amaldi, Luciano Felicetti, and Nadia Campioni. Flow of Informational RNA from Cytoplasmic Poly(A)-Containing Particles to Polyribosomes in *Artemia salina* Cysts at Early Stages of Development 49

D. S. Durica and H. M. Krider. Studies on the Ribosomal RNA Cistrons in Interspecific *Drosophila* Hybrids. I. Nucleolar Dominance 62

Klaus von der Mark, Helga von der Mark, Rupert Timpl, and Robert L. Trelstad. Immunofluorescent Localization of Collagen Types I, II, and III in the Embryonic Chick Eye 75

Brief Notes

M. Azim, H. Surani, and Matthew H. Kaufman. Influence of Extracellular Ca^{2+} and Mg^{2+} Ions on the Second Meiotic Division of Mouse Oocytes: Relevance to Obtaining Haploid and Diploid Parthenogenetic Embryos 86

Jean Marot, Robert Bellé, and René Ozon. *In Vitro* Facilitation of *Xenopus* Oocyte Maturation by Subthreshold Doses of Progesterone 91

Hiroshi Seshimo, Masashi Ryuzaki, and Katsutoshi Yoshizato. Specific Inhibition of Triiodothyronine-Induced Tadpole Tail-Fin Regression by Cathepsin D-Inhibitor Pepstatin 96

Number 2, September 1977

Full Papers

Dora C. Miceli, Enrique J. Del Pino, Francisco D. Barbieri, Marta I. Mariano, and Jorge S. Raisman. The Vitelline Envelope-to-Fertilization Envelope Transformation in the Toad *Bufo arenarum* 101

Donald A. Colbert, M. Valeria Tedeschi, Vladimir Atryzek, and Nelson Fausto. Diversity of Polyadenylated Messenger RNA Sequences in Normal and 12-hr Regenerating Liver 111

H. M. Phillips, M. S. Steinberg, and B. H. Lipton. Embryonic Tissues as Elasticoviscous Liquids. II. Direct Evidence for Cell Slippage in Centrifuged Aggregates 124

Haimanti DasGupta, Robert Schiffman, and Carol S. Deppe. Control of Fungal Development. II. Kinetics of Growth during Dikaryosis in *Schizophyllum commune* 135

Fay O. Stenhouse and Keith L. Williams. Patterning in *Dictyostelium discoideum*: The Proportions of the Three Differentiated Cell Types (Spore, Stalk, and Basal Disk) in the Fruiting Body 140

Robert L. Trelstad. Mesenchymal Cell Polarity and Morphogenesis of Chick Cartilage 153

Lewis B. Holmes and Robert L. Trelstad. Patterns of Cell Polarity in the Developing Mouse Limb 164

David C. Beebe and Joram Piatigorsky. The Control of δ-Crystallin Gene Expression during Lens Cell Development: Dissociation of Cell Elongation, Cell Division, δ-Crystallin Synthesis, and δ-Crystallin mRNA Accumulation . 174

David P. Philipp and Gregory S. Whitt. Patterns of Gene Expression during Teleost Embryogenesis: Lactate Dehydrogenase Isozyme Ontogeny in the Medaka (*Oryzias latipes*) 183

Stephen M. DiZio and Richard J. Tasca. Sodium-Dependent Amino Acid Transport in Preimplantation Mouse Embryos. III. Na^+-K^+-ATPase-Linked Mechanism in Blastocysts 198

Leslie P. Kozak, John J. Eppig, Doris Dahl, and Amico Bignami. Ultrastructural and Immunohistological Characterization of a Cell Culture Model for the Study of Neuronal-Glial Interactions 206

Herman Denis and Maurice Wegnez. Biochemical Research on Oogenesis. Oocytes and Liver Cells of the Teleost Fish *Tinca tinca* Contain Different Kinds of 5S RNA 228

Brief Notes

Lorraine Flaherty, Linda Cantor, Debra Zimmerman, and Dorothea Bennett. Cell Surface Antigens on Erythroid Cells. A Comparison of Normal and Anemic (*W/W*) Mice 237

Rosalind J. Zalin. Prostaglandins and Myoblast Fusion 241

James D. Hoerter. Dosage Effects of the White (*d*) and Melanoid (*m*) Genes on Pigment Pattern in the Mexican Axolotl, *Ambystoma mexicanum*, Shaw . 249

Kwang W. Jeon. A New Method for Obtaining Aposymbiotic Hydra Using Trimethoprim as a Bleaching Agent 255

K. Shiokawa, Y. Yasuda, and K. Yamana. Transport of Different RNA Species from the Nucleus to the Cytoplasm in *Xenopus laevis* Neurula Cells .. 259

Ronald E. Law, Adolph J. Ferro, Michael R. Cummings, and Stanley K. Shapiro. *S*-Adenosylmethionine:Homocysteine Methyltransferase during Embryogenesis in *Musca domestica* 263

Donald D. Brown, Igor B. Dawid, and Ronald H. Reeder. *Xenopus borealis* Misidentified as *Xenopus mulleri* 266

Author Index for Volume 59 268

Features *f*-1

The Subject Index for Volume 59 will appear in the December 1977 issue as part of a cumulative index for the year 1977.

Information for Authors

Developmental Biology will publish papers on problems of development in the broadest sense. Embryonic and postembryonic development, growth, regeneration and tissue repair in plants and animals, and the analysis of these phenomena at the molecular and cellular levels are topics suitable for the journal. Papers on reproductive biology, aging, and teratology will be published only when they bear on developmental mechanisms of general interest. Papers are sought that employ the techniques and concepts of many disciplines including those of biochemistry, biophysics, cytology, experimental morphogenesis, genetics including cell genetics, immunology, neurobiology, physiology, and microbiology. In all areas, analytical rather than descriptive studies will be favored.

Original papers only will be considered. Submission of a manuscript implies the authors' assurance that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Explicit proof of these implied assurances may be required at the Editor's discretion. Articles and any other material published in *Developmental Biology* represent the opinions of the author(s), and should not be construed to reflect the opinions of the editor(s), the publisher, or the Society for Developmental Biology.

Articles usually do not exceed 15,000 words and must be preceded by an abstract of about 200 words that should be fully intelligible by itself. Brief notes are 2500 words or less, including the bibliography, and should have an abstract of less than 100 words. All papers will be published in English.

Manuscripts should be concise. Full documentation of results in support of conclusions should be combined with maximum brevity compatible with clarity. The discussion section should relate the present work to previous knowledge but should not be expanded into a review of the field. The standard order of sections is: abstract, introduction, materials and methods, results and discussion. Combined results and discussion may be used. In the manuscript acknowledgment, references, footnotes, tables, and figure legends should follow the discussion in that order. All pages of the manuscript should be numbered consecutively and typed double-spaced throughout. Authors should provide a running title of 35 letters and spaces or less. Use footnotes sparingly. Cite them with superscript numbers and type them on a separate sheet. With rare exceptions do not italicize for emphasis.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Abbreviations and units should be used consistently. Consult the lists published in the *Proceedings of the National Academy of Sciences (U.S.A.)* the *Journal of Biological Chemistry*, and *Biochemistry* for standard abbreviations which need not be defined. Collect all abbreviations into a footnote and refer to it at the first use of an abbreviation. The use of units should follow the Systeme International. Use prefixes, e.g., μM, not $10^{-6} M$. Note that M stands for molar, not mole. Use hr, min, sec, rpm, and cpm without definition, without a period, and without an "s" in the plural (i.e., 20 min).

Figures should be numbered consecutively in the order of their appearance and each should have a descriptive legend. Mark all figures with the author's name.

Line drawings should be made with India ink on smooth white paper or professional-quality drafting paper. Do not submit original line drawings larger in size than 13 x 10 in.;

instead enclose smaller prints. Good quality prints are acceptable in any case. Drawings will be reduced as much as is compatible with the complexity of the figure, usually to column or page width. The lettering should be large enough to be at least 1.5 mm high after reduction.

Photographs should be the actual size for reproduction and labeled with letters 2 to 4 mm high. Figures should fit column or page width and should be at most 8 in. long. If the author decides to bleed the page (no margins), labels and figure numbers should be no closer than 3/4 in. to the margin. Figures to be bled must be 7 × 10 1/4 in. (17.8 × 26 cm) to allow trimming. When several figures appear together as one plate, mount them on cardboard or paper as close together as possible. The engraver will tool thin white lines between figures. Give magnifications in the legends or indicate them with a scale marker on the photograph. The second copy of each manuscript must include good-quality glossy prints of all photographs. Two reviewers' copies should be submitted when originals are oversized or mounted on heavy cardboard. The author will defray the expense of color plates.

Tables should be typed on separate pages and numbered consecutively with Arabic numerals, and each should have a concise heading.

References to the literature should be cited as: Doe (1965) has observed that . . . ; (Doe, 1955); Doe *et al.* (1960) should be used in the case of articles with more than two authors. Use suffixes a, b, etc. following the date to distinguish two or more works by the same author(s) in the same year (Doe, 1960a, b). Numbered references will no longer be accepted. Arrange literature citations in the bibliography alphabetically according to the surname of the author, using the following order of items: author(s), date of publication, title of article or book, journal name, volume number, inclusive pages, publisher and city (for books only). Abbreviate titles of journals according to *Chemical Abstracts' Service Source Index*.

Page proofs rather than galleys will be sent. This speeds production. Detailed instructions will be sent with proofs. A quick response and minimal changes on proof are imperative to maintain schedules.

Features will include announcements of meetings and courses in the field of developmental biology, and some meeting reports. Persons interested in preparing meeting reports are encouraged to contact the Editor.

To submit a manuscript, send two copies to Igor B. Dawid, Department of Embryology, Carnegie Institution of Washington, 115 West University Parkway, Baltimore, Maryland 21210, Tel. (301) 235-0460. Indicate the name, address, and telephone number of the author who should be contacted in editorial matters.
